CROs & CDMOs

Get on Board!

Hot topics in (pre)clinical contract research to biomanufacturing

From preclinical development to market approval, the trend to outsource clinical development, biomanufacturing, and packaging remains unbroken: target screening with multi-omics, resolution to the single cell and spatial information, from hits to leads and POC to the clinical evaluation is based on scaleable process development. Customised and even continuous USP, DSP, polishing, sterile filling including serialisation is key to success. However, as novel formats for biologics and biosimilars emerge, diversification through special know-how is mandatory. New formulations, delivery forms, trial formats and patient enrolment strategies also challenge the growing industry.

Present your expertise

CDMOs & CROs, providers of modular production plants, equipment and digital specialists as well as experts in emerging areas will have the opportunity to present their latest products, services, and equipment in this special. EUROPEAN BIOTECHNOLOGY goes out to decision makers throughout the entire European Life Science sectors. Take advantage of the journal's highly relevant readership and grab this opportunity to target your audience!

Topics to be covered

CDMOs: vaccine vectors, mRNA vaccines, polyclonal antibody sera, ATMPs, process development, single use equipment, media/cell line development, glycooptimisation, antibody conjugates, packaging, fill & finish, QbD, process development automation, combination therapies...

CROs: stratification, gene editing, immunooncology, biosimilars, animal/cell models, ADMET, advanced trial designs & statistics for adaptive trails, EMR-guided patient recruitment, remote monitoring...

Editorial Deadline
09-09-2022
