CDMO Landscape Europe

Expertise that shapes biotech innovation

Europe's CDMO ecosystem is more diverse and strategically important than ever. From early development to commercial manufacturing, CDMOs play a decisive role in translating scientific breakthroughs into scalable, compliant, and market-ready therapies. In the Spring 2026 issue of European Biotechnology Magazine, we will publish a dedicated "CDMO Landscape Europe" feature that maps this evolving environment and highlights the capabilities, technologies, and strategic positioning of leading service providers across the continent. The feature will offer readers a structured overview of who does what, where expertise is concentrated, and how CDMOs are adapting to new scientific, regulatory, and commercial demands. It is designed for biotech executives, investors, and partners who need clarity in a complex and competitive market.

Showcase your capabilities to a pan-European biotech audience

We invite CDMO companies operating in Europe to participate in this special landscape by showcasing their expertise, platforms, and value proposition. Participation offers a unique opportunity to position your organization in front of a highly targeted readership of biotech decision-makers actively seeking development and manufacturing partners. Contributors can highlight their technological strengths, therapeutic focus areas, capacity, and differentiators within a credible editorial environment trusted by the European life sciences community. The CDMO Landscape Europe is a way to be discovered, understood, and compared in context.

Join us in shaping a reference guide that reflects the real breadth and depth of Europe's CDMO sector.
